

This demo illustrates PDF text markup annotations:

- Highlight (The text is highlighted.)
- Strikeout (~~The text is strikeout.~~)
- Underline (The text is underlined.)
- Squiggly underline (The text is squiggly underlined.)

In this demo, you can find text and markup it. To do this:

- Load a custom document by clicking **Open...**
- Click the **Find and Markup...** button on the demo toolbar, and specify the text to be found in a document and markup type in the opened dialog.

As a result, all occurrences of the text in a document are marked up.

In addition, you can access markup annotation properties by selecting the annotation in the text markup annotations list on the right.

If you want to delete an annotation in the markup annotations list, either right click the annotation and click **Delete current annotation** or press the **Delete** key.

Finally, to save the resulting document, click **Save As...**
